Greater Peterborough Area Climate Change Action Plan (CCAP)

16-718 Moved by – Deputy Mayor Hutton Seconded by – Councillor Miszuk

That the revised Greater Peterborough Area Climate Change Action Plan be adopted and that the Township of North Kawartha's portion be implemented as budgets permit through the annual budgeting process;

And further that the Township of North Kawartha's Community Sector and Corporate Sector greenhouse gas emission reduction targets of 25% and 20% respectively, and associated local action plans, be adopted and implemented as budgets permit. Carried.

Certified a true copy of Motion 16-718 passed by the Council of the Township of North Kawartha on the 20th day of December, 2016.

Connie Parent, Dipl. M.M., CMO

Clerk

Section 1: Introduction and Overview

Greater Peterborough Area Climate Change Action Plan

In 2014, the Greater Peterborough Area's (GPA) member communities joined more than 250 other communities across Canada to address climate change through participation in the Partners for Climate Protection (PCP) program aimed at reducing GHG emissions from both municipal/First Nation corporate operations and community sources.

As part of the PCP program, the Climate Change Action Plan sets a course to reduce local contributions to climate change and prepare communities for present and expected changes that will occur as a result of climate change. This plan represents an integrated approach to dealing with some of the most important issues related to the sustainability of our diverse region. The overall objective of the CCAP is to reduce our greenhouse gas emissions through a reduction in fossil fuel use and lowering our energy consumption, and to better prepare for our changing climate. The Plan identifies strategies, actions, and emission reduction targets that fit with and address the needs of each municipality and First Nation within the GPA. This regionally coordinated approach will ensure that we act together to safeguard the health of our residents and ensure the stability of our local economic and natural resources against impacts related to climate change.

Climate Change Vision

In 2010, the GPA embarked on an exciting journey – the development of an Integrated Community Sustainability Plan, coined *Sustainable Peterborough*. Within the Sustainable Peterborough Plan, climate change was identified as one of the eleven key theme areas of focus. Each community of the GPA is working together to collectively achieve the following vision, as originally identified as the climate change goal in the Sustainable Peterborough Plan:

We will reduce our contributions to climate change while increasing our ability to adapt to climate change conditions.

North Kawartha's Community and Corporate Action Plans

Chapter 7 of the CCAP includes North Kawartha's Community (Section 2) and Corporate (Section 3) Action Plans. Both of these build on the overarching components outlined in the main CCAP, but provide greater detail specific to North Kawartha. They both include the following:

- Where are we now a brief discussion of community and corporate baseline GHG emissions.
- Where do we want to go GHG emissions reductions targets for the community and corporation.
- How are we going to get there actions that the community and corporation will take to achieve its emissions reduction targets.

Section 2: Community Action Plan

Where are we now?

In 2011, 12,128 tonnes of CO₂e were emitted by the Township of North Kawartha community. Based on the projected growth for the Township of North Kawartha, community emissions are expected to grow to 14,377 tonnes CO₂e by 2031 if nothing is done to reduce GHG emissions. For further details on the North Kawartha's baseline community emissions (PCP Milestone 1), please see the Appendix attached to this chapter entitled *North Kawartha Corporate and Community Emissions Inventory*.

Where do we want to go?

The North Kawartha community is aiming to achieve a 25% reduction in its GHG emissions from the 2011 baseline by 2031. This is equivalent to 3,074 less tonnes of CO_2e emitted per year by 2031, which would put the Township's community emissions at 9,054 tonnes of CO_2e per year by 2031 compared to the current 12,128 tonnes per year.

How are we going to get there?

The following tables detail the strategies and actions that North Kawartha will use to achieve its community GHG emissions reduction target. Further detail on each strategy is provided in the main *Climate Change Action Plan* document.

Our Homes

Strategy H1: Help existing homes become more energy and water efficient and be more adaptable to climate risks		
	Mitigation impact: direct Adaptation impact: direct	
Primary Action	Develop and implement a comprehensive multi-year energy retrofit program focused on existing households to achieve efficiency gains of at least 20% to 45% depending on the age and type of building.	
Primary Action Assumptions	Implement retrofits in 30% of the residential housing stock by 2031.	
GHG Emission Reduction Potential	337 tonnes of CO₂e/per year	

Strategy H2: Build new homes to be more efficient and have a smaller environmental footprint		
	Mitigation impact: direct	Adaptation impact: direct
Primary Action		nt in new building stock efficiency aimed at valent (0.14 to 0.24 GJ/m2) in all new buildings by
Primary Action Assumptions	Results in full electrification of e	nergy end uses.
Supporting Actions/	Supporting Policies	
Policies	 'Solar Ready' Official Pla 	n Updates
GHG Emission	438 tonnes of CO₂e/per year	
Reduction Potential		

Strategy H3: Reduce t emissions	he amount of waste generated by residents that contribute to greenhouse gas		
	Mitigation impact: direct Adaptation impact: none		
Primary Action	Explore feasibility of capturing energy from waste (e.g. anaerobic digestion) to		
	manage organic material and to reduce emissions of methane gas (County and		
	City partnership).		
Supporting Actions/	Supporting Actions & Initiatives		
Policies	Implement a "less waste challenge" to encourage reduction in waste		
	generation, with a particular focus on food waste		
	Review efficiency of waste collection program and implement changes to		
	reinforce diversion programs and reduce collection truck emissions		
GHG Emission	119 tonnes of CO₂e/per year		
Reduction Potential			

Our Workplaces and Schools

Strategy W1: Improve	energy and water efficiency of existing buildings and business operations		
Primary Action	Mitigation impact: direct Work with utilities (PDI, Hydro One, Enbridge as appropriate) to deliver a coordinated deep energy retrofit program to industrial, commercial, and institutional organizations.		
Primary Action Assumptions	Implement retrofits in 60% of industrial, commercial & institutional buildings by 2031.		
Supporting Actions/ Policies	 Supporting Actions & Initiatives Encourage local businesses to participate in energy benchmarking through the use of Energy Star Portfolio Manager provided through Natural Resources Canada Work with the Building Owners and Managers Association (BOMA) to expand their Operator Training program to the Greater Peterborough Area (County and City partnership) 		
GHG Emission Reduction Potential	114 tonnes of CO₂e/per year		

Strategy W2: Build new buildings to be more efficient and have a smaller environmental impact		
	Mitigation impact: direct Adaptation impact: direct	
Primary Action	Implement gradual improvement in efficiency of industrial, commercial, and institutional buildings.	
Primary Action	 Commercial & Institutional: full electrification, and uses 30% less energy 	
Assumptions	 Industrial: full electrification, and uses 60% less energy 	
GHG Emission	72 tonnes of CO₂e/per year	
Reduction Potential		

Strategy W3: Facilitate climate change friendly business operations and practices			
	Mitigation impact: indirect	Adaptation impact: direct	
Primary Action	Support Sustainable Peterboroug	h Business Initiative to build a toolkit for	
	Greater Peterborough Area businesses to assist with climate change impact		
	analysis and business continuity planning for extreme weather.		
Supporting Actions/	Supporting Actions & Initiatives		
Policies	Engage with businesses and institutions to implement corporate		
	sustainability initiatives aimed at reducing greenhouse gas emissions		
	(County and City partnership)		
	 Work with institutions and businesses to support implementation of 		
	food waste reduction and	d/or diversion (County and City partnership)	
GHG Emission	Impact on GHG emissions nominal		
Reduction Potential			

Strategy W4. Support	local economic resilience and growth of the local green economy Mitigation impact: indirect Adaptation impact: indirect		
Primary Action	Support Peterborough GreenUP as a "one-stop shop" for businesses to learn about and advance sustainability through the Green Business Peterborough Program.		
Supporting Actions/	Supporting Actions & Initiatives		
Policies	 Explore opportunity and locations to establish a local eco business zone or "Partners in Project Green" program to share resources amongst businesses and encourage green industries (County and City partnership) 		
	 Support the Greater Peterborough Chamber Of Commerce to establish a business leadership and mentorship program to support energy and climate leadership amongst businesses as part of the Peterborough Business Excellence Awards 		
GHG Emission	Impact on GHG emissions nominal		
Reduction Potential			

Strategy W5: Facilitate low carbon energy generation and local energy security			
	Mitigation impact: direct	Adaptation impact: direct	
Primary Action	Conduct a regional study to explore the potential to implement local renewable energy generation and storage (institutional, commercial, industrial, and residential).		
Primary Action	Solar PVs are to generate 5% of	the electricity demand in IC&I and residential	
Assumptions	buildings, while 6% of the natural gas consumed in all buildings are to come from		
	renewable sources by 2031.		
GHG Emission	112 tonnes of CO₂e/per year		
Reduction Potential			

On the Move

Strategy M1: Build an active transportation network and support active transportation		
	Mitigation impact: direct Adaptation impact: none	
Primary Action	Reduce vehicle trips and foster greater walking and cycling mode share through a coordination of efforts.	
Primary Action	Active transportation in the County is expected to focus on recreational	
Assumptions	opportunities and a nominal shift in modal split is expected. Development of the	
	Active Transportation Master Plan is currently underway.	
Supporting Actions/	Supporting Actions & Initiatives	
Policies	 Develop a Complete Streets Policy and Guidelines, including consistent sidewalk requirements and guidance on paved shoulders/cycle lanes 	
GHG Emission	Impact on GHG emissions nominal	
Reduction Potential		

Strategy M2: Facilitat vehicle use	e alternatives to single-occupant ve	ehicle use to reduce frequency of personal
	Mitigation impact: direct	Adaptation impact: none
Primary Action	Explore feasibility of a carpool lot partnership with the County and c	network (formal and informal spaces) (in other Townships).
Primary Action	Carpooling, or travel as a passenger in a vehicle, to increase by 3% by 2031.	
Assumptions		
Supporting Actions/	Supporting Actions & Initiatives	
Policies	 Work with businesses and carpoolers 	schools to implement preferred parking for
GHG Emission	88 tonnes of CO₂e/per year	
Reduction Potential	- / /	

Strategy M3: Make public transportation more appealing to increase its usage		
Primary Action	Mitigation impact: direct Explore feasibility and joint County-Townships delivery of County Transit services or alternative methods of public transportation as part of next County Transportation Master Plan Update.	
Primary Action Assumptions	Feasibility to be determined after next Transportation Master Plan Update	
GHG Emission Reduction Potential	Non-quantifiable with available information	

Strategy M4: Help transition vehicles to use cleaner and lower greenhouse gas emitting fuel sources						
	Mitigation impact: direct Adaptation impact: none					
Primary Action	Support a shift in vehicle technology to Electric Vehicles (EVs).					
Primary Action	2% of all vehicles on the road in 2031 are to be EVs; vehicles more efficient due					
Assumptions	to higher standards.					
Supporting Actions/	Supporting Actions & Initiatives					
Policies	 Install electric vehicle charging stations for public usage 					
	 Support [local organizations] to work with local businesses to transition 					

Strategy M4: Help transition vehicles to use cleaner and lower greenhouse gas emitting fuel sources

GHG Emission
Reduction Potentia

corporate fleets to EV 1,995 tonnes of CO₂e/per year

Our Food

Strategy F1: Support localization of the food system							
	Mitigation impact: indirect Adaptation impact: indirect						
Primary Action	Undertake a community food system assessment to better understand local food production and movement within the GPA.						
Supporting Actions/	Supporting Policies						
Policies	 Update Official Plan policies to support urban agriculture and the growing, processing and distribution of locally-produced food for all residents 						
	Supporting Actions & Initiatives						
	 Continue to expand the network of community gardens throughout the Greater Peterborough Area and engage the broader community in the value of gardening Support local organizations to provide community skill sharing programs to increase awareness among community members on how to grow, process, and store food Support local organizations in training, facilitating access to land and promoting successful entrepreneurship of new farmers and food business to increase the production and processing, distribution and retailing of local food 						
GHG Emission Reduction Potential	Impact on GHG emissions nominal						

Strategy F2: Encourage purchasing of locally produced food						
	Mitigation impact: indirect	Adaptation impact: indirect				
Supporting Actions/	Supporting Actions & Initiatives					
Policies	 Support local organizations to promote the marketing of locally- produced food through initiatives such as the Purple Onion Festival and Local Food Month 					
	 Expand and promote the Farmers Market Network across the Greater Peterborough Area 					
	 Support and encourage farm gate sale of produce 					
GHG Emission	Impact on GHG emissions nominal					
Reduction Potential						

Strategy F3: Reduce the amount of wasted food					
	Mitigation impact: direct Adaptation impact: none				
Primary Action	Implement a residential awareness campaign to encourage elimination of wasted food in the home, workplaces, and schools.				
Primary Action Assumptions	Reduce the proportion of wasted food in the waste stream by 11% by 2031.				
GHG Emission Reduction Potential	22 tonnes of CO₂e/per year				

Our Land

change mitigation an	en land use policy and the development review process to better support climate displayment and the development review process to better support climate displayment.				
	Mitigation impact: indirect Adaptation impact: direct				
Primary Action	Establish a multidisciplinary review team to assess provincial and local land use planning legislation and tools and make recommendations to decision-makers on how to best implement an ecosystem-based approach to the development application process (partnership amongst all communities).				
Supporting Actions/	Supporting Policies				
Policies	 Integrate climate change policies into Official Plans 				
	 Continue to implement land use policy that supports building complete communities that are mixed-use, compact, and higher density to achieve intensification targets outlined in the Provincial Growth Plan 				

Supporting Actions & Initiatives

- Sustainability metrics tool to predict, measure and report the sustainability performance (including GHG emissions) of proposed developments focusing on the built environment, mobility, natural environment, and infrastructure and buildings (e.g. Richmond Hill/Vaughan/Brampton)
- Continue/enhance education opportunities on the need for increased housing density and implications related to climate change at all points of contact with decision-makers, stakeholders, and the public

GHG Emission
Reduction Potential

Non-quantifiable with available information

Strategy L2: Identify climate change risks and prepare for potential impacts						
	Mitigation impact: none Adaptation impact: direct					
Primary Action	Conduct a Greater Peterborough Area-wide vulnerability assessment of expec climate change impacts (including drought and lake levels) (coordinated amon all communities).					
Supporting Actions/ Policies	Adopt the Low Impact Development Stormwater Management Planning and Design Guide (CVC/TRCA) for landscape-based stormwater management planning and low impact development stormwater management practices					

Update engineering design standards to improve climate change readiness of new infrastructure by taking a green infrastructure approach first and increasing flood standards to a 200-year storm standard rather than the current 100-year standard None Reduction Potential

Strategy L3: Protect a	nd enhance natural assets					
	Mitigation impact: indirect Adaptation impact: direct					
Primary Action	Develop and implement a Natural Heritage System Plan (City and County with Townships).					
Supporting Actions/	Supporting Policies					
Policies	 Place restrictions on cutting down trees on private property and/or a tree replacement policy 					
	 Update Official Plan policies to require greater buffers around wetlands to protect them from surrounding land uses 					
	Supporting Actions & Initiatives					
	Support and promote local Conservation Authorities' tree planting programs to encourage planting trees on public and private property Support local Conservation Authorities to deliver planting and					
	 Support local Conservation Authorities to deliver planting and restoration projects at strategic high priority areas with climate ready species 					
GHG Emission	Non-quantifiable with available information					
Reduction Potential						

Strategy L4: Facilitate adaptation	best management practices for lo	ow emission farming and climate change
	Mitigation impact: indirect	Adaptation impact: direct
Supporting Actions/	Supporting Actions & Initiatives	
Policies	 emissions modeling tool emissions and exploring Support local agricultura and training sessions to change mitigation and acceptance of the composition of the Canada-Ontario Enfarmers to increase known 	Iture and Agri-Food Canada's no-cost Holos GHG to assist farmers in assessing their GHG various farm management scenarios I organizations to host local agricultural forums engage with farmers on implementing climate daptation related best management practices al organizations] to promote local participation environmental Farm Program to encourage viedge, conduct assessments, and develop and al Farm Plans for their farms
GHG Emission	289 tonnes of CO₂e/per year¹	
Reduction Potential	20,000	

¹ Total reduction potential per year based on uptake of anaerobic digesters (biogas), enteric fermentation reduction, changing manure management practices, and adopting best practices for soil management.

Our People

Strategy P1: Prepare for the health impacts associated with a changing climate						
	Mitigation impact: none Adaptation impact: direct					
Primary Action	Conduct a local community vulnerability assessment of public health impacts					
	from climate change to identify climate risks on vulnerable populations (in					
	partnership with all communities).					
Supporting Actions/	Supporting Actions & Initiatives					
Policies	 Establish a protocol for extreme weather alerts and flooding updates 					
GHG Emission	None					
Reduction Potential						

Strategy P2: Foster a culture of climate change awareness						
	Mitigation impact: indirect Adaptation impact: indirect					
Supporting Actions/	Supporting Actions & Initiatives					
Policies	 Support Sustainable Peterborough and other local organizations in hosting regular events focused on climate change (speaker series, annual event, etc.) Support Sustainable Peterborough in seeking buy-in and endorsement/support for the shared vision and goals of Community Climate Change Action Plan from existing groups and organizations in the Greater Peterborough Area Support Sustainable Peterborough to host a community, youth, adult, and senior climate change champion through the annual Sustainable Peterborough Awards 					
GHG Emission	Impact on GHG emissions nominal					
Reduction Potential						

Strategy P3: Encourage civic engagement around climate change						
	Mitigation impact: indirect	Adaptation impact: indirect				
Primary Action	Develop a charter and guidelines (engagement strategy) to foster meaningful community engagement in climate change issues and environmental stewardship (partnership amongst all communities).					
Supporting Actions/	Supporting Actions & Initiatives					
Policies	 Support Sustainable Peterborough to establish a youth advisory committee on climate change to empower youth to take action on climate change 					
GHG Emission Reduction Potential	Impact on GHG emissions nominal					

Decarbonization of the Electric Grid

Since the baseline year of 2011, the Province of Ontario has taken steps to reduce the GHG emissions associated with the electrical grid. For example, it closed all of its coal-fired power plants. This in turn will result in significant GHG Emission Reduction Potential for the North Kawartha community, totalling 1,738 tonnes of CO_2e /per year.

Section 3: Corporate Action Plan

Where are we now?

In 2011, 735 tonnes of CO₂e were emitted by the Township of North Kawartha's corporate operations. The business-as-usual forecast for the corporate operations is based on annual growth rates derived from official population projections. Emissions from corporate operations are projected to increase to 876 tCO₂e per year by 2031 if the Township continued to operate as it did in the baseline year without taking any actions to reduce GHG emissions. For further details on the North Kawartha's baseline corporate emissions (PCP Milestone 1), please see the Appendix attached to this chapter entitled *North Kawartha Corporate and Community Emissions Inventory*.

Where do we want to go?

North Kawartha is aiming to achieve a 20% reduction in its corporate GHG emissions from the 2011 baseline by 2031. This is equivalent to 149 less tonnes of CO_2e emitted per year by 2031, which would put the Township's corporate emissions at 586 tonnes of CO_2e per year by 2031 compared to the current 735 tonnes per year.

How are we going to get there?

The following table details the strategies and actions that North Kawartha will use to achieve its corporate GHG emissions reduction target.

	Timeframe			
Township of North Kawartha Corporate Action Plan	Underway or Complete	Short (1- 4 years)	Med (5- 9 years)	Long (10+ years)
Buildings				
Strategy 1: Institutionalize energy efficiency and lov	v carbon thin	king into t	he organiz	ation
Implement employee training for energy efficiency		Χ	Χ	Χ
Implement staff behaviour change programs to reduce usage of electricity and heating in day-to-day activities		X	X	X
Establish a policy to consider highest energy efficiency as part of procurement requirements and evaluation	x	Х	Х	X
Continue to monitor incentive programs offered through electricity providers and natural gas providers to be leveraged for implementing energy efficiency	Х	Х	Х	Х
improvements				
GHG Emission Reduction Potential: In-direct GHG reduc	tions			

Strategy 2: Enhance operational efficiency of existing buildings			
Formalize and continue to deliver an equipment preventative maintenance program on	Χ	Х	X
an ongoing basis (e.g. annual HVAC inspections)	` ^	^	^
Conduct regular energy audits of Township facilities on a rotational basis to identify	Х	Х	Х
opportunities for improved efficiency and produce annual energy report cards	^	^	^
Conduct building re-commissioning to optimize building operations where applicable		Χ	Χ
Implement a utility bill validation process to identify and correct any billing issues and	Х	Х	Х
variations in energy usage	^	^	^
GHG Emission Reduction Potential: 19 tonnes of CO₂e/per year			
Strategy 3: Build municipal facilities to ensure high environmental performance			
Establish a Green New Building Policy to require new municipal buildings and major	Х		
renovations be built to high environmental standards	^		
Implement a full lifecycle analysis costing for new buildings or major renovations to		v	
consider the sustainability of the building over its life		Х	
GHG Emission Reduction Potential: 80 tonnes of CO₂e/per year			
Strategy 4: Improve environmental performance of existing municipal facilities			
Integrated energy audits/assessments of each facility into the annual Building Condition	V	.,	V

GHG Emission Reduction Potential: 93 tonnes of CO₂e/per year				
Streetlighting				
Strategy 8: Improve energy efficiency of the streetlighting system				
Retrofit all street lighting and parking lot lighting to LED	Χ			
GHG Emission Reduction Potential: 2 tonnes of CO₂e/per year				
Solid Waste				
Strategy 9: Reduce the amount of organic waste generated through municipal op	erat	ion	S	
Continue to participant in the office waste reduction and diversion initiatives	Χ	Χ	Χ	Χ
Continue to collect organic waste from Township offices and manage in backyard composters	Х	Χ	Χ	Χ
Conduct a corporate waste audit to understand waste composition and identify opportunities for improvement		Χ	Χ	
Develop/formalize a corporate waste diversion target and strategy		Χ		
Develop and implement a corporate green procurement policy		Χ		
Develop and implement a green event policy		Χ		
GHG Emission Reduction Potential: 4 tonnes of CO₂e/per year				

Decarbonization of Electricity Grid

Since the baseline year of 2011, the Province of Ontario has taken steps to reduce the GHG emissions associated with the electrical grid. For example, it closed all of its coal-fired power plants. This in turn will result in significant GHG Emission Reduction Potential for North Kawartha's corporate emissions, totalling 55 tonnes of CO_2e/per year.

Peterborough Area Climate Change Action Plan

Township of North Kawartha – Corporate and Community Emissions Inventory
Partners for Climate Protection Milestone 1

November 17, 2015

1 Introduction and Overview

Greater Peterborough Area Climate Change Action Plan

Sustainable Peterborough is developing a Climate Change Action Plan (CCAP) for the Greater Peterborough Area to reduce local contributions to climate change and prepare the community for present and expected changes that will occur as a result of our changing climate. This Plan represents an integrated approach to dealing with some of the most important issues related to the sustainability of this diverse region. The overall objective of the CCAP is to reduce greenhouse gas (GHG) emissions, reduce the use of fossil fuels, lower energy consumption, and adapt to changing climate.

The Plan will identify goals, actions, and emission reduction targets that fit with and address the needs of each municipality and First Nation within the Greater Peterborough Area. This report summarizes the baseline greenhouse gas emissions for the Township of North Kawartha, both from corporate operations and from community sources to satisfy Milestone 1 of the Partners for Climate Protection (PCP) Program.

Partners for Climate Protection Program

The PCP program is a network of Canadian local governments that have made a commitment to reduce GHG emissions and act on climate change. Administered by the Federation of Canadian Municipalities, the program has over 225 local and regional governments participating. The City of Peterborough joined the program in December 2000. The County of Peterborough and the eight Townships have all joined in 2014 and 2015.

The Climate Change Action Plan is following the PCP's five-milestone framework for the reduction of greenhouse gas emissions (i.e. climate mitigation). The five-milestone framework is a performance-based model used to guide communities to reduce GHG emissions. Once a milestone is completed, the community – typically led by the local municipality – submits their material to the PCP program for a technical review and approval. To prepare the Climate Change Action Plan, the following 5 milestones will be completed:

- 1. Establish a GHG inventory and forecast
- 2. Set emission reduction targets
- 3. Develop Climate Change Action Plans
- 4. Implement the local action plans
- 5. Monitor progress and report on results

Milestone 1 – GHG Inventory and Forecast

A greenhouse gas inventory brings together data on community and municipal sources of greenhouse gas emissions to estimate emissions for a given year. For the Greater Peterborough Area Climate Action Plan, 2011 has been selected as the baseline year. Establishing a baseline is a useful tool to identified areas for improvement, inform development of a GHG reduction action plan, estimate cost savings from reductions, and serve as a reference point to track improvements. Associated with the baseline GHG inventory is also a forecast that projects future emissions based on assumptions about population, economic growth and fuel mix.

Two separate GHG inventories and forecasts have been created for the Township of North Kawartha: one for municipal corporate operations and one for community sources. The inventories consist of the following sources of GHG emissions.

Corporate Operations Inventory	Community Inventory
 Buildings Streetlighting Water and sewage treatment Municipal fleet Solid waste 	 Residential Commercial and institutional Industrial Transportation Solid waste

Details of each inventory are provided in Sections 2 and 3 of this report.

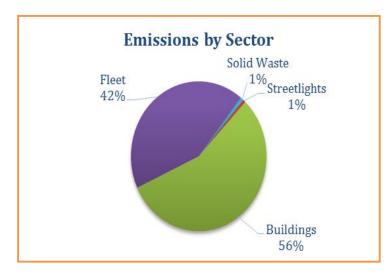

2 Township of North Kawartha Corporate Emission Inventory

The Corporate inventory tracks emissions from municipal operations. The criteria for including emissions in the corporate inventory relies on the concept of *operational control*, and requires the municipality to report all emissions from operations over which it has control.

Township of North Kawartha Corporate Emissions Inventory

In 2011, 735 tonnes of CO2e were emitted by the Township of North Kawartha's corporate operations. Breakdowns of emissions by sector and source are presented visually in Figure 1 and summarized in Figure 2 below.

Fig 1. Township of North Kawartha Corporate Emissions by Sector and Source

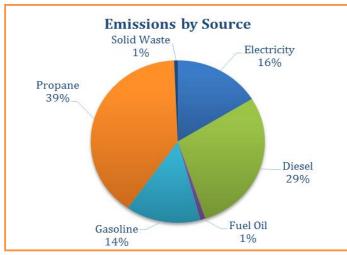

Fig 2. Township of North Kawartha Corporate Tonnes CO2e by Sector and Source

Sector	Emissions (tCO2e)
Buildings	412
Fleet	313
Water & Sewage	0
Streetlighting	5
Solid Waste	5
Total	735

Source	Emissions (tCO2e)
Natural Gas	0
Electricity	119
Gasoline	102
Diesel	211
Propane	291
Fuel Oil	7
Solid Waste	5
Total	735

Corporate Operations Data Summary

Energy consumption for **buildings** was determined using actual billed electricity and heating fuel data provided by the municipality. **Fleet** fuel consumption was based on actual consumption data for litres of gasoline and diesel provided by the municipality. Energy consumption for **streetlighting** was based on data for the year 2013, however, the portfolio of streetlights in the community and their hours of operation were similar in 2011.

Solid Waste emissions are estimated assumptions about the total volume of waste produced yearly at North Kawartha buildings.

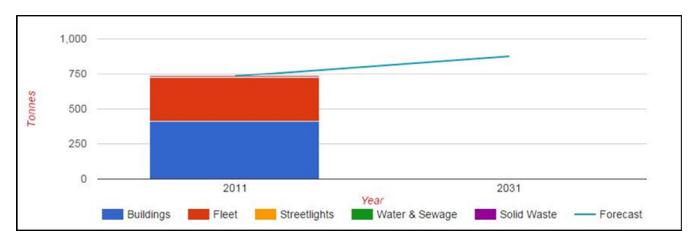

North Kawartha has no municipal water infrastructure, so there are no emissions for Water and Sewage.

All **emissions coefficients** are derived from Canada's *National Inventory Report*, in line with PCP methodologies, and electricity emissions factors reflect the carbon intensity of Ontario's electricity grid for 2011.

Business-As-Usual Forecast for Township of North Kawartha Corporate Operations

A business-as-usual (BAU) forecast is an estimate of annual GHG emissions into the future considered projected population growth if the Township continues to operate exactly is it did in 2011 (i.e. if nothing is done to reduce emissions). The BAU forecast for the corporate operations is based on annual growth rates derived from official population projections. It was assumed that municipal operations would increase with population growth – this aligns with standard PCP methodology for creating BAUs. Emissions from corporate operations is projected to increase to 877 tCO2e per year by 2031, compared to 735 tCO2e per year in 2011. This BAU projection is presented in Figure 3 below.

Fig 3. Township of North Kawartha Corporate BAU Forecast – 2011-2031

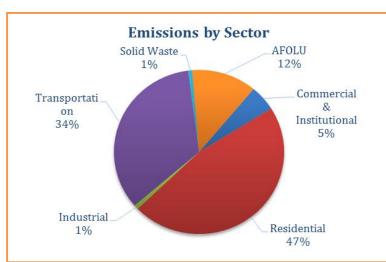

3 Community Emission Inventory

The Community inventory tracks emissions from all community sources, including electricity use and heating in homes and businesses, transportation, waste generation, and agricultural production. The municipality may or may not have a direct influence over any of these emissions.

Township of North Kawartha Community Emissions Inventory

In 2011, 11,820 tonnes of CO2e were emitted by the Township of North Kawartha community. Breakdowns of emissions by sector and source are presented visually in Figure 4 and summarized in Figure 5 below.

Fig 4. Township of North Kawartha Community Emissions by Sector and Source

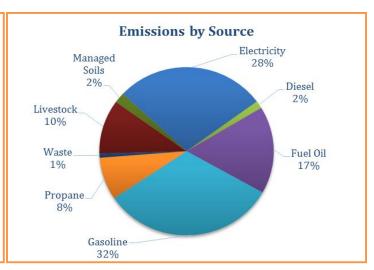

Fig 5. Township of North Kawartha Community Tonnes CO2e by Sector and Source

Sector	Emissions (tCO2e)
Residential	5,521
Commercial and Institutional	596
Industrial	99
Transportation	4,046
Waste	93
Agriculture Forestry and Othe	er 1,465
Land Uses	
Total	11,820

Source	Emissions (tCO2e)
Natural Gas	0
Electricity	3,309
Gasoline	3,834
Diesel	170
Propane	966
Fuel Oil	1,983
Solid Waste	93
Livestock	1,233
Managed Soils	232
Total	11,820

Community Data Summary

For emissions from stationary energy (residential, commercial and institutional, and industrial), where possible energy consumption was based on actual metered energy consumption data provided by local utilities.

Electricity consumption data was provided by Hydro One. There is no Natural Gas service in North Kawartha.

For **Fuel Oil** and **Propane**, no real consumption data could be acquired. As a result, consumption was estimated by taking the number allocating those to electric heating, propane, and heat oil respectively based on Natural Resources Canada (NRCAN) averages for heating fuel type for Ontario and information about the structure of the heating fuel market in Peterborough County. Once households had been allocated to each fuel type, total consumptions were estimated using average consumption rates for those fuel types by household for Ontario. No estimates of Fuel Oil and Propane consumption for non-residential categories could be determined. These estimates contain a high level of uncertainty and should be revised if better data can be acquired from local heating fuel providers.

Estimates for **Transportation** fuel consumption were based on a resident activity/ vehicle kilometers travelled (VKT) model where total VKT's were estimated using household surveys of daily trip length conducted by Transportation Tomorrow. Once a model of VKT's was derived, fuel consumption was estimated by allocating kilometers across a vehicle mix derived from actual vehicle registration data provided by the Clean Air Partnership, and average fuel consumption rates for those vehicle types derived from NRCAN. The result was a model of Gasoline, Diesel, and Propane consumption for the Transportation sector. Because the transportation model is based on resident activity surveys, it does not include emissions from the commercial sector or non-automobile emissions (water travel and air travel), these are areas for future improvement.

Solid Waste emissions were estimated by taking the quantity of waste collected at the Peterborough City and County Waste Management Facility (PCCWMF) from North Kawartha, and estimates for the waste stream and gas collection performance from PCCWMF.

Due to the rural nature of the project area for the GPA CCAP, a model of emissions from **Agriculture, Forestry,** and **Other Land Uses (AFOLU)** has been created. Because data on land use change was not available for 20 years prior to the baseline year, no estimates for emissions from land use change have been reported here, however in future inventories it is anticipated that such estimates will be able to be created based on the baseline statistics for land use created for this project.

Emissions from Managed Soils, Enteric Fermentation, and Manure Management are based on a number of sources. Activity data for the sector are based on Statistics Canada data on the composition of livestock and crops in Trent Lakes's agricultural sector. Statistics Canada aggregates data for Trent Lakes with North Kawartha – these have been separated in this model using data on relative quantities of farm land in each community.

Emissions factors for animal types, manure management systems, and crops are based on estimates derived from Canada's National Inventory Report. Efforts have been made to be as comprehensive as possible, however, in some cases data to estimate emissions from certain sources was unavailable. Future improvements could be made with the help of more complete data, however, it is believed that all major emissions sources have been identified. In particular, estimates of emissions from enteric fermentation and manure management have a high degree of confidence.

Business-As-Usual Forecast for Township of North Kawartha Community

A business-as-usual (BAU) forecast is an estimate of annual GHG emissions into the future considered projected population growth if the Township continues to operate exactly is it did in 2011 (i.e. if nothing is done to reduce emissions). The Community BAU forecasts are based on annual growth rates derived from official population projections in the Growth Plan. In line with PCP protocol methodologies, emissions for residential and transportation sectors were assumed to increase with population growth, while commercial, institutional, and industrial emissions were assumed to increase with projected employment growth. Based on the projected growth for the Township of North Kawartha, community emissions are expected to grow to 14,106 tonnes CO2e by 2031. This BAU projection is presented in Figure 6 below.

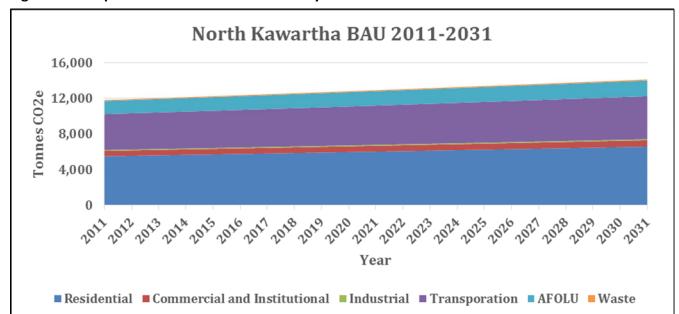

Fig 6. Township of North Kawartha Community BAU Forecast – 2011-2031

4 Next Steps

Completion of the Milestone 1 baseline inventories is the first step in the Greater Peterborough Area Climate Change Action Plan. Next steps involve identifying opportunities to reduce GHG emissions based on the inventories and prepared itemized action plans with estimated GHG reductions and costs and establishing reduction targets. Actions identified in the action plans will be done in collaboration with the eleven other local governments in the Greater Peterborough Area to explore efficiencies and cumulative impacts. Ideas for actions will be based on best practice research, public input, and ongoing meetings with 80+ community organizations and stakeholders.
